What is Cooperative Care?

- A **consulting service** that enables you to confidently work with difficult cases or the type of patients you may not see frequently. Also, as an additional clinical resource when you are short staffed or need extra help.
- An **extension of our Professional Clinical Services** team that combines their deep experience with Ottobock components and working with patients.
- A **team approach that streamlines the fitting process** while achieving the best possible outcome.

Above all else, you maintain your relationship with your patient and demonstrate to referral sources your ability to handle any situation. Just as you might use Ottobock's Fabrication Center as an extension of your practice you can turn to Cooperative Care for almost any clinical situation.

Cooperative Care at your facility

- Our **clinician visits your facility**, which eliminates the need for you to travel, allows your colleagues to participate, and is less disruptive to your schedule.
- Invite a **local therapist** to attend the fitting where they can learn about the technology and provide more effective therapy for your patients.

This is designed to give you the highest level of convenience while still delivering an excellent outcome for your patient.
