

Infinity Air Walker

Hard shell, soft interior

Quality for life

Infinity Air Walker

The Infinity Air Walker is designed for the conservative or post-operative treatment of various foot or ankle injuries - and it lives up to the "Air" in its name in a number of ways:

One key feature of the Walker is that it is incredibly lightweight. Its slatted frame structure means it is highly breathable, creating an ambient temperature that makes it comfortable to wear. The integrated air cushion allows compression to be applied simply and precisely, without using any additional tools. Both high and low versions of the Infinity Air Walker are available.

Benefits at a glance:

- ▶ Lightweight, ensuring high wearer comfort
- ▶ Breathable structure creates a pleasant ambient temperature (1)
- ▶ Individually adjustable toe protector (2)
- ▶ Antishock, non-slip sole
- ▶ Integrated pump administers precise level of stabilizing compression (3)
- ▶ Slatted socket design protects from pressure sores (4)
- ▶ Universally applicable for both left and right
- ▶ Rain and night covers available on request

	Infinity Air Walker, High 50S19	Infinity Air Walker, Low 50S23
Indications
